

MODIFIER M-100

MODIFIER M-100 is basically a powder formaldehyde scavenger. It is usually used in conjunction with urea formaldehyde powder adhesive, Cascamite 801. The incorporation of MODIFIER M-100 into Cascamite 801 glue mix helps to reduce formaldehyde emission in work area as well as finished products. Other beneficial properties of using MODIFIER M-100 are the reduction in surface glue penetration and lengthening of glue mix pot life.

MODIFIER M-100 does not contain any toxic or hazardous chemicals. The main ingredients are urea, formaldehyde catcher, different type of shell and wheat flours, filler, etc.
